SUBJECT INDEX

Bare metal ions
Reactions of monosubstituted alkanes with bare metal ions. An effort toward a more unified picture for the gas-phase chemistry of R–X molecules 93

Coordination compounds
Methods for molecular mechanics modeling of coordination compounds 177

Copper(I) compounds
Structural aspects of red copper(I) compounds 71

Five-membered monoheterocycles
Organometallic complexes of heterocycles. I. σ,π-Complexes of five-membered monoheterocycles 237

Heterocycles
Organometallic complexes of heterocycles. I. σ,π-Complexes of five-membered monoheterocycles 237

Main group halides
Electronic structure and molecular geometry of main group halides 149

Monoheterocycles
Organometallic complexes of heterocycles. I. σ,π-Complexes of five-membered monoheterocycles 237

Monosubstituted alkanes
Reactions of monosubstituted alkanes with bare metal ions. An effort toward a more unified picture for the gas-phase chemistry of R–X molecules 93

N-donor ligands
Ruthenium(I) complexes containing bridging N-donor ligands: structure, synthesis and reactivity patterns 319

Organometallic complexes
Organometallic complexes of heterocycles. I. σ,π-Complexes of five-membered monoheterocycles 237

Red copper(I) compounds
Structural aspects of red copper(I) compounds 71

Ruthenium(I) complexes
Ruthenium(I) complexes containing bridging N-donor ligands: structure, synthesis and reactivity patterns 319

R–X molecules
Reactions of monosubstituted alkanes with bare metal ions. An effort toward a more unified picture for the gas-phase chemistry of R–X molecules 93

Schiff base adducts
Ligand environment and the structure of Schiff base adducts and tetracoordinated metal-chelates 1

Tetracoordinated metal-chelates
Ligand environment and the structure of Schiff base adducts and tetracoordinated metal-chelates 1
